Art Unit: 2836

The following is an examiner's statement of reasons for indicating allowance of claim 1: Ker et al. and Carobolante disclose a power supply clamp circuit for preventing damage to integrated circuits when electrostatic discharge occurs, wherein the power supply clamp circuit comprises a first voltage generator, a first PMOS transistor, a first NMOS transistor, a second NMOS transistor, and a second PMOS transistor, but does not disclose that the integrated circuits further comprises a second voltage source that is independent from the first voltage source and having the same voltage as the first voltage source. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.
